# Storeroom app

An intuitive inventory management app that's easy to use on any personal or company smartphone.

# Simplify management of industrial consumables and spare parts

With the Storeroom app, you can digitalize your storeroom easily—without the complexity or high costs.

## No hardware investment

No warehouse hardware needed; use your personal smartphone or shared company device.

## Easy setup/ easy start

Upload your data and start using, no onboarding investment needed.

## Actionable reports with ERP integration

Seamless integration with your company ERP. Compatible with our special inventory optimization algorithm.

## Automatic replenishment

Supports automatic replenishment with suppliers. Eliminates manual ordering and minimizes stockouts.

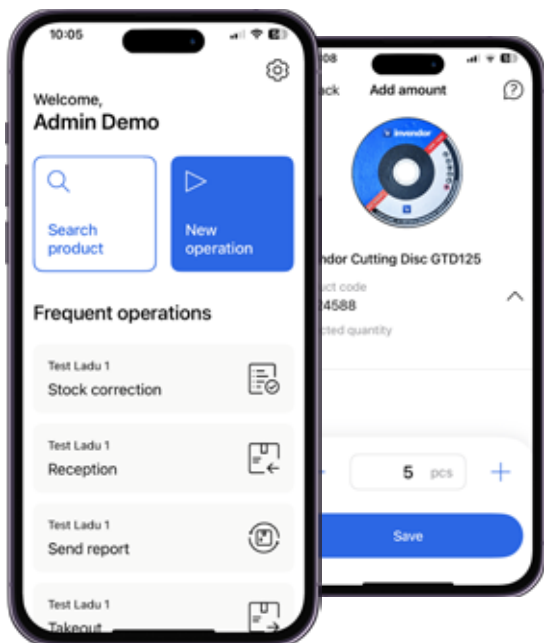

## Where to use?

### Vendor managed inventory (VMI)

- Vendor stores its products at the customer's site
- Customers scan items when they take them
- Vendor tracks the usage & replenishes stock automatically

### Internal inventory tracking

- Track items in your storeroom with a simple scan
- Always know what's in stock
- Reduce manual counting & missing items
- No complex system needed – just a smartphone!

## Key Features

### Use any smartphone

No hardware investment needed.

### Access control

Set roles for different users.

### Unlimited system

Expand the system as the business scales. Unlimited number of users, items, warehouse transactions.

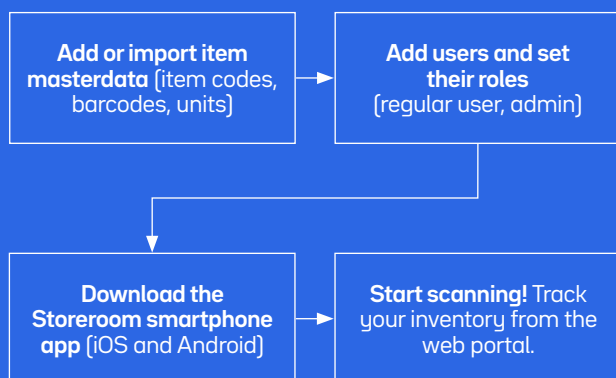

### Additional data

Connect project number, workorder numbers with item takeouts.

### Supports Bluetooth scanner

Combine Storeroom app with a smart-tablet.

## Get started in under an hour

## How does it work?

- The user identifies themselves on the app.
- The user picks necessary items from the shelves, scans the barcodes or NFC tags and inserts the amounts.
- The system registers how many items were taken, at what time, and by which user.
- The system automatically reports what items and quantities need to be replenished.

## Invendor Storeroom app supports various warehouse operations:

- Takeout
- Reception
- Return
- Write-off
- Stock counting
- Transfer between warehouses
- Purchase ordering
- Tool tracking

## Registration options

Barcodes

QR codes

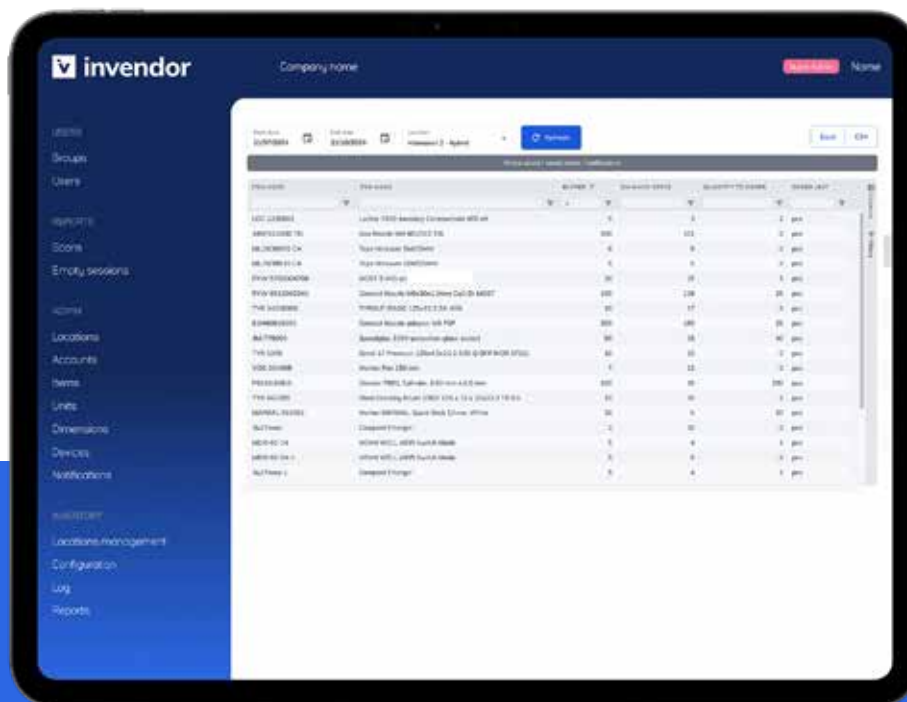

NFC tags

Text recognition

# Invendor's Ecosystem

Achieve the best possible cost of ownership with modern hardware, smart software, and seamless integrations.

## Manage Everything From Our Web Portal

- Import data and add new users and locations.
- Check and generate the reports you need and receive notifications for key events.
- Share web portal access to your peers and customers and manage their user roles.

## Web Portal Functionalities

- User and role management
- Customizable reports
- Mobile app customizer
- Defining operations
- Linking extra data

## Build System Integrations with Our Public API

- Integrate Invendor with existing ERP systems using the Invendor API.
- The API provides access to key data, enabling seamless bi-directional data exchange and the implementation of custom business rules.

We automate industrial consumables management for you, so you can focus on more important tasks.
